MiREYE
IMAGING INC.

About MirEye

MirEye focuses on the design and development of high-tech imaging solutions and exceptional after-sales service and support.
We incorporate advanced technology in our fully integrated veterinary x-ray solutions to enable the body part auto-thickness detection (ADT) feature.
This method automatically measures the thickness of the patient's anatomy, provides the appropriate technique to the x-ray generator, significantly optimises the image quality, prevents an unnecessarily high exposure to the patient, and ensures a smooth acquisition workflow.

MirEye Collimator

MirEye's unique and patented veterinary x-ray collimator with a 3D camera offers body part auto-thickness detection (ATD).
The collimator ATD Module automatically measures the thickness of the anatomy and provides more accurate exposure values (kVp and mAs) to the x-ray generator.

MirEye Veterinary X-Ray Systems

MirEye's unique and patented veterinary x-ray collimator with a 3D camera offers body part auto-thickness detection (ATD). The collimator ATD Module automatically measures the thickness of the anatomy and provides more accurate exposure values (kVp and mAs) to the x-ray generator.

Features

- Collimator with 3D camera for ATD
- 4-way floating table
- Restraining straps
- Urine track
- 15.6 inch touch screen
- 32kw, single phase high frequency generator
- Capacitor-Based energy storage
- Auto-tube calibration
- Max. Amperage input: 16 Amp
- Canon E7239X tube

MirEeye is fully capable of **custom design**, development and manufacture of any veterinary x-ray solution for your OEM needs.
