

ESON NEWS 2020-03-05 "WE INVENT THE FUTURE"

As an invention and manufacturing company, we get questions from time to time about how a small company like ours can make products of higher standards and that also lasts longer than our competitors.

I haven't the answer to that, except that we are always trying to be in the frontline, bringing new products to the needing, starting new trends and create better usability in a safe and valued context.

The picture to the left is an example of our quality and how durable and longlasting our products are.

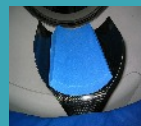

This TraumaTransfer™ was sold 2004-11-08 to the Region hospital in Falun, Dalecarlia.

After more than fifteen years of serving the emergency departement, we got it back for a re-furbishing today.

Some say that it's not the best way to do business making products that will have a lifecycle like this, but we are and always will be more interested in doing the best products.

"If there is a product on the market that is good but can be done better, we will make a better solution. If there's no solution and just a framework with issues and obstacles reported, we will invent and present a durable solution".
