

INTEGRATES WITH MOST LEAD APRON DESIGNS
MOVES WITH THE ARM TO ENSURE PROPER COVERAGE OF THE AXILLA
COMFORTABLE TO WEAR, EASY TO APPLY

ADDITIONAL PROTECTION DURING SURGICAL PROCEDURES

The global topic of Axillary & breast protection is currently at the forefront of radiation safety as some procedures can expose clinicians to ionising radiation in this anatomical area.

This is where the Mammo-shield™ helps. Specially designed to sit comfortably under the arm and move with the wearer to help provide protection in this vulnerable area.

DEVELOPED WITH HEALTHCARE PROFESSIONALS

We have worked alongside leading orthopaedic surgeons to develop the Mammo-shield™- our solution for enhanced axillary protection, offering added peace of mind.

Our simple yet robust design seamlessly integrates with most lead aprons & tops. The flexible configuration ensures adequate axilla coverage in a variety of arm positions.

Contact your local Rothband representative for more information and a demonstration.
